

Architecture Inventory

Generated 2026-07-25

Architecture Inventory

Hand-curated documentation of every route, page, entry point, and functional surface. Cross-checked against `src/App.tsx` , `src/components/permitpilot/data.ts` , and `src/pages/*` . Audited 2026-07-24. Mirror of `/architecture-inventory` (`src/pages/ArchitectureInventory.tsx`).

Summary

Metric	Count
Total rows	90
Declared routes	89
Unique page files	89
Nested routes	3
Dynamic routes	2
Redirects/aliases	2

Metric	Count
Public pages	4
Auth-required pages	85
Admin/staff pages	10
Role-gated pages	9
Direct-URL-only pages	42
Always-visible in sidebar	26
Status: Working	16
Status: Partial	4
Status: Mock	65
Status: Placeholder	5
Backend: Fully connected	8
Backend: Partially connected	3
Backend: UI only	16
Pages with modals	8
Pages with tabs	5

Main Table

Area	Parent	Name	Route	Type	Params	Entry Points	Secondary Entries	Auth	Context	Purpose	Functionality	Actions	Tabs	Modals	Data Source	Backend	Status	Visibility	Source File	Route File	Notes
Public	—	Home	/	static	none	sidebar → Help & Support ›	logo click	public	none	Marketing / landing	Product overview and CTAs	navigate	—	Contact form	static	UI only	Working	always visible	src/pages/Home.tsx	src/App.tsx	Rendered inside Permi

Area	Parent	Name	Route	Type	Params	Entry Points	Secondary Entries	Auth	Context	Purpose	Functionality	Actions	Tabs	Modals	Data Source	Backend	Status	Visibility	Source File	Route File	Notes
						Pricing & Overview; header → Home; direct URL															tPilot Shell.
Public	—	Login	/login	static	none	auth redirect; direct URL	sign-out flow	public	none	Sign in	Email /password + rejection reason surfacing	submit	—	—	Supabase	Fully connected	Working	always visible	src/pages/Login.tsx	src/App.tsx	Blocks rejected members with toast.
Public	—	Sign up	/signup	static	none	Login → Sign up link	direct URL	public	none	Register / request access	Creates auth user pending admin approval	submit	—	—	Supabase	Fully connected	Working	always visible	src/pages/Signup.tsx	src/App.tsx	Not linked from sidebar.
Public	—	Contact	/contact	static	none	Home CTA	direct URL	public	none	Inbound contact	Submits to contact_form	submit	—	—	Supabase + edge	Fully connected	Working	direct URL only	src/pages/Contact.tsx	src/App.tsx	Not in sidebar.

Orphaned Pages & Structural Risks

- **Direct-URL-only routes (no sidebar link):** 42. Discoverable only via typed URL.
- **Alias routes:** /delivery/authorization ⇔ /onboarding/authorization (same component), /uci ⇔ /dashboard/uci (same component, but /dashboard/uci bypasses RequireUciAccess).
- **404 masking:** unmatched routes redirect to /dashboard via <Route path="*" element={<Navigate to="/dashboard" replace />} /> — real 404s are hidden.
- **Dynamic id gap:** /projects/:id/timeline and /projects/:id/gantt have no list-to-detail navigation; only the hard-coded /projects/alpha is reachable.
- **Orphaned page files:** none — every file in src/pages/* is registered in src/App.tsx .

Direct-URL-only routes (42)

- /contact — Contact (src/pages/Contact.tsx)

Placeholder (5)

- `/projects/new` — New Project (Portal Credentials) — backend: UI only
- `/content-studio` — Content Studio — backend: UI only
- `/uci/application-builder` — UCI Application Builder — backend: UI only
- `/settings` — Settings — backend: UI only
- `/admin/endpoints` — Endpoints — backend: UI only

Architecture Replication Notes

Public

Auth-adjacent surfaces. Only Login/Signup/Contact hit the backend; Home is a static marketing shell rendered inside PermitPilotShell.

Command

Portfolio + project navigation. All dashboards and project detail views are mock. Introduce a `/projects/:id` list-to-detail pattern before wiring real data.

Onboarding

LOA signing is fully backend-connected (Supabase + Storage + PDF). Replicate the typed/drawn signature capture pattern first — it is the reference implementation for real user data on this platform.

Delivery

Mixed states: LOA alias is real; Operations Board / Matrix / Portal Harvest / Response Matrix are mock. AiWorkflow persists to localStorage only — swap to a workflows table before shipping.

Intelligence

DesignCheck landing pages are mock; the Code Analyzer is the only surface that calls an edge function (`analyze-compliance-drawings`). Presets persist locally.

Utility Coordination

All UCI subroutes are role-gated via `RequireUciAccess` and back onto static mock content. Provider Compare and Load Profile Analyzer touch the backend partially.

Field

SIR family and Mobile* surfaces are mock UI shells. No offline sync, no photo persistence.

Closeout

Fully mock hierarchy. No aggregation from upstream project data.

Resources

Reference Library, Utility Coverage, and Glossary are real static content (utility provider dataset). Analytics & Messages are mock.

Settings

Client-only placeholder. No preferences persist.

Administration

Authorizations, Members, and Audit Log are fully backend-connected (Supabase + security-definer RPCs). Invoicing / Past Performance / CRM / Milestone Billing / Endpoints are mock.

Demo

McDonald's executive demo with GuidedTour overlay. Static, illustrative only.

Internal

This inventory and the catch-all `*` redirect. Not linked in sidebar.
